ANALOYD ABUTMENT DUPLICATION SYSTEM

The main purpose of abutment duplication

is to reduce to a minimum the number of unpleasant and unhealthy manipulations associated with the removal of healing caps or temporary abutments from the mucosa during the clinical stages of prosthesis on implants.

Thanks to abutment duplication

most of clinical stages of prosthesis on implants (up to total completion of the prosthetic structure) are performed when the custom-made abutments are permanently fixed on the implants; while their duplicates are used for laboratory steps.

Analoyd abutment duplication system

provides an opportunity to duplicate custom-made abutments without the use of costly technologies. This technology is simple; it is affordable to any dentist and dental technician. It significantly simplifies laboratory and clinical stages of prosthesis on implants; and most importantly, it is much healthier for patient.

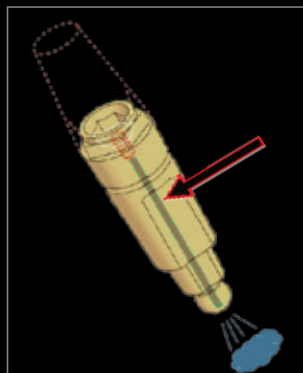

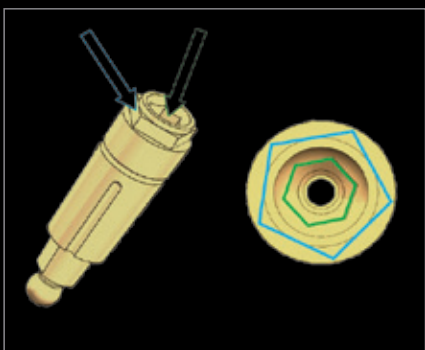

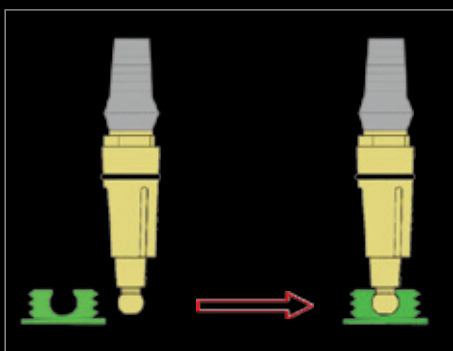

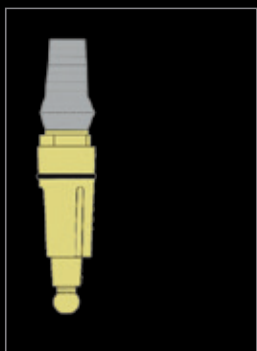

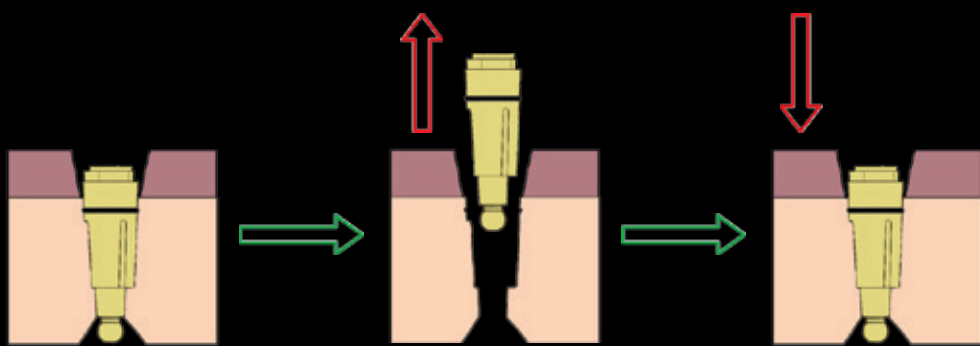

Analoyd abutment duplication system

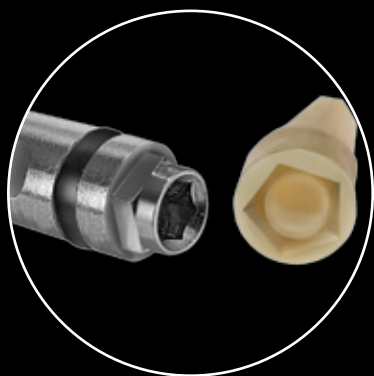

is suitable for duplication of custom-made abutments of popular implant systems.

Analog LA has a novel concept of shape and unique concept of application of dental implants analogs.

The design specific of analog LA predetermines an easy, inexpensive and very accurate way of obtaining the duplicate of custom-made abutment.

The Analoyd abutment duplication method facilitates the work of the dentist and helps to relieve the patient from repeated harmful procedure.
